

Trailer Sentry

Quadrant™ GPS Trailer Sentry™ & Trailer Sentry Plus™

The fastest, easiest GPS trailer and asset tracking solutions available.

Quadrant GPS Trailer Sentry solution is designed for managers who need to know where trailer assets were last unhooked and if they have moved from the last reported location. Location update records are only sent if the trailer location or other conditions have changed. This minimizes cellular communications costs and provides accurate reporting of the trailers position when moved, even if it is not connected to tractor power.

Quadrant GPS Trailer Sentry Plus solution includes all of the exception-based reporting of Trailer Sentry, and also shows detailed reports of where and for how long the trailer was stopped at each location along its route. Managers can also put a virtual fence around customer depots to record the exact time of entry and exit for load/unload time management.

Both solutions also indicate the current status as well as the last time the trailer assets were hooked and unhooked. Knowing when the asset was last used helps managers identify under-utilized assets.

Benefits - Experience the WebTech Difference

- Efficient, effective trailer management
- Improved trailer asset management and utilization
- Increased security of trailer and content assets
- Reduced trailer / tractor ratios
- Easy installation and use
- Reporting of location and time on hook and off hook
- Automatic security geofence when off-hook
- Automatic crossing alert if trailer moved
- Automatic GPS odometer mileage reporting
- Flexible access to maps and reports

Features - Get the WebTech Edge

Quadrant GPS Trailer Sentry

- Automatically updates trailer location within 30 minutes when moved
- Immediate on/off hook location update when connected to tractor power
- GPS odometer mileage during trips
- Exceptions-based reporting through the Quadrant system

Quadrant GPS Trailer Sentry Plus

Includes all Quadrant GPS Trailer Sentry features plus the following bonus features:

- Automated Stop Reporting
- 1-hour updates while moving
- Geofence and Landmarks Quadrant
